1. The categories should present only expeditions under that category. Right now it is presenting all.
Will send the app logo soon as well.
2. Click on "Add to my expeditions":
- pdf of the lesson is downloaded to the device and the lesson metadata is saved to local database.
- will change the status of the first lessons of this expedition to "Downloading" with the percentage on the thumbnail.
- there is an additional status pending with the clock icon on the thumbnail for the rest of the lessons in this expedition.
- once The lesson with status "Downloading" is done Saving everything to a local data base Including the files, the next lesson on on the list will change the status and start downloading.
- Lesson that is already downloaded will have "Broadcast to my students" button (cannot broadcast until it is downloaded).
- until all the lessons are downloaded
- the expedition that is currently downloading or already downloaded appears in the "My expeditions " section.
4. We just need a way to change the expeditions that we record for the marketing video.It can be the source code zip file. We also need the structure so we can bring the real data but we can get it from the source code.
5. Search
6. "Add to my expeditions" will be presented only on expeditions that were not yet added to "My expeditions" meaning only those that have not been downloaded yet- should be downloaded.
7. Category list- add the red arrow down if there is more to scroll according to the design.
8. Same for expeditions list- we need some indication that there is more to scroll on the design there is a scroll bar on the side.
9. Side menu- make the selected- bold as in the design
10. Expedition page- remove the gray background around the student handout files as per design.
11. Settings- open a blank fragment as we don't have the design for that yet.
12. Footer- RobotLAB vr text should be light gray as per design.
13. The expeditions list fragment- please check the design regarding the background and the frame. As well as the categories menu and its dividers.
14. Lessons lessons should have a lighter gray frame.
15. My students- check the design for the background and the frame for devices.
16. My students- the count on the top of the devices should match the number of devices connected status.
17. Click on broadcast to my students:
- will send the file to other devices (we will integrate this functionality later on).
- open the image file on the tablet inside the app with go back, previous and next (if applicable) buttons per design.
18. Expedition's number of lessons- should reflect the number of lessons this expedition has.
19. Each expedition has its own list of lessons. That is different.

20. Side menu- could you please change the clickable area to be slightly bigger? it's hard to click on the right section.
